Page 2

Acknowledgment is made of applicant's election of the species of Figure 9 for prosecution on the merits. Due to the fact that a large number of subcombinations useable in the disclosed combination are being claimed an additional restriction between these subcombinations is being claimed.

In the following restriction requirement claims 34, 41 and 46 are linking claims.

Additionally, claims 35 and 36 will be examined with any group that is elected.

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 37, drawn to a clamping/spreading tool having point of spring application force on a rod that is detachable.
- II. Claim 38, drawn to a clamping/spreading tool having a point of spring application force on a rod that is shiftable.
- III. Claim 39, drawn to a clamping/spreading tool having a spring that is wound in the support.
- IV. Claims 40, 42, 43, and 49, drawn to a clamping/spreading tool having a spring that is an unwound band seated in a groove of the rod.
- V. Claims 44 and 50, drawn to a clamping/spreading tool having a first end of a spring that is rotatably supported on the support.
- VI. Claim 45, drawn to a clamping/spreading tool having a handle on the support.
- VII. Claims 47-48, drawn to a clamping/spreading tool having a release lever.

Claim s 34, 41, and 46 link(s) inventions I-VII. The restriction requirement for the linked inventions is **subject to** the nonallowance of the linking claim(s), claims 34, 41,

and 46. Upon the indication of allowability of the linking claim(s), the restriction requirement as to the linked inventions **shall** be withdrawn and any claim(s) depending from or otherwise requiring all the limitations of the allowable linking claim(s) will be rejoined and fully examined for patentability in accordance with 37 CFR 1.104 **Claims that require all the limitations of an allowable linking claim** will be entered as a matter of right if the amendment is presented prior to final rejection or allowance, whichever is earlier. Amendments submitted after final rejection are governed by 37 CFR 1.116; amendments submitted after allowance are governed by 37 CFR 1.312.

Applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, the allowable linking claim, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Inventions I-VII are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct if they do not overlap in scope and are not obvious variants, and if it is shown that at least one subcombination is separately usable.

In the instant case, subcombination group I having a spring point of application detachable from the rod need not have the spring point of application shiftable along the rod as required in group II and could instead have a spring point of application that is not shiftable along the rod therefor group I has

Application/Control Number: 10/576,091

Art Unit: 3723

separate utility. Conversely, subcombination group II having a spring application point shiftable along the rod need not have a spring that has a spring application point detachable from the rod. By extending this analysis, it can be similarly shown that all groups have separate utility. See MPEP § 806.05(d).

Page 4

The examiner has required restriction between subcombinations usable together. Where applicant elects a subcombination and claims thereto are subsequently found allowable, any claim(s) depending from or otherwise requiring all the limitations of the allowable subcombination will be examined for patentability in accordance with 37 CFR 1.104. See MPEP § 821.04(a). Applicant is advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application.

Restriction for examination purposes as indicated is proper because all these inventions listed in this action are independent or distinct for the reasons given above and there would be a serious search and examination burden if restriction were not required because one or more of the following reasons apply:

- (a) the inventions have acquired a separate status in the art in view of their different classification;
- (b) the inventions have acquired a separate status in the art due to their recognized divergent subject matter;

Application/Control Number: 10/576,091 Page 5

Art Unit: 3723

(c) the inventions require a different field of search (for example, searching different classes/subclasses or electronic resources, or employing different search queries);

For example the search for subcombination group I requires a separate text and subclass search for detachable elements in class 16 that is not required for the search of the other groups. Subcombination group II requires a separate text and subclass search for springs adjustable along a rod in class 74 that is not required for the search of the other groups. By extension of this analysis it can be shown that all groups exhibit separate and unique searches. To search all groups in one application would present a serious burden for the Office.

- (d) the prior art applicable to one invention would not likely be applicable to another invention;
- (e) the inventions are likely to raise different non-prior art issues under 35 U.S.C.101 and/or 35 U.S.C. 112, first paragraph.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a invention to be examined even though the requirement may be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not distinctly and specifically point out supposed errors in the restriction requirement, the election

shall be treated as an election without traverse. Traversal must be presented at the time of election in order to be considered timely. Failure to timely traverse the requirement will result in the loss of right to petition under 37 CFR 1.144. If claims are added after the election, applicant must indicate which of these claims are readable on the elected invention.

If claims are added after the election, applicant must indicate which of these claims are readable upon the elected invention.

Should applicant traverse on the ground that the inventions are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Robert C. Watson whose telephone number is 571 272-4498. The examiner can normally be reached on Mon. - Thurs. , 5:30am - 4:00pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Joseph J. Hail III can be reached on 571 272-4485. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
